How did the Fund perform last year?

VP Mid-Cap seeks investment results, before fees and expenses, that track the performance of the S&P MidCap 400® Index (the "Index").

The Fund invests in financial instruments that ProFund Advisors believes, in combination, should track the performance of the Index. During 2024, the absence of 'Magnificent Seven' companies drove underperformance relative to the S&P 500® Index.

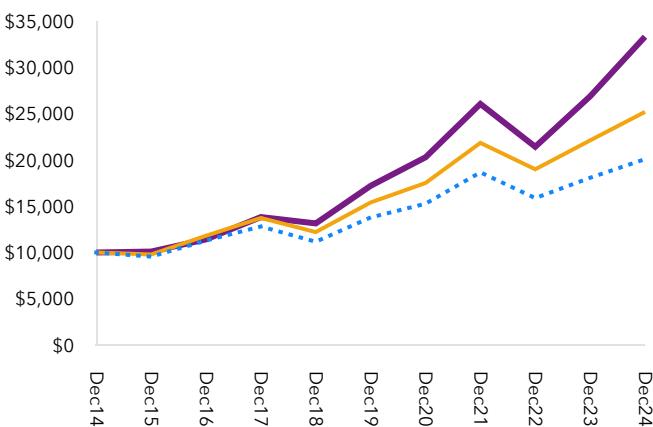

For the year ended December 31, 2024, the Fund had a total return of 11.14% and an average daily statistical correlation of over 0.99 to the daily performance of the Index. For the same period, the Index had a total return of 13.93% and a volatility of 15.89%.

Primary factors affecting Fund performance include the total return of the securities and derivatives held by the Fund, the performance of the reference assets to which the derivatives are linked, financing rates paid or earned, the types of derivative contracts used (and their correlation to the Fund's Index), expenses, transaction costs, the volatility of the Fund's Index, and other miscellaneous factors.
